EDUCATION

VNU University of Engineering and Technology
Information Technology
2020-2024   **3.6/4.0**

Phan Boi Chau High School for the Gifted
Informatics
2017-2020   **9.0/10.0**

SKILLS

Data mining

Natural language processing

C++

Python

Java

SQL

AWARDS

- The greatest team in Data Science of "UET Hackathon Open 2022" by VNG voted
- Third Prize in UET Science Research Competition 2021
- Consolation Prize in The 15th Nationwide Creative Competitions of Youth, Children 2019
- Most Promising Prize in "Act Inno" Competition of STEME DAY 2019
- Second Prize in Nghe An Excellent Student Competition In Information

EXPERIENCE

WORK

Student Researcher at Data Science and Knowledge Technology Laboratory - DS&KTLab | 2020-2022

Joining DS&KTLab since my freshman year has broadened my experience in the field of data science. I have many opportunities of taking part in university research projects as well as corporate projects.

PUBLICATION

Vietnamese Fake News Detection Based on Hybrid Transfer Learning Model and TF-IDF | 2021

This is the accomplishment of me and my colleagues' efforts at DS&KT Lab. We propose a new approach to detect Vietnamese fake news on social networking sites by using PhoBERT pre-trained language model in combination with TF-IDF and CNN. On the dataset of ReINTEL shared task, the suggested model obtained outstanding results with an AUC of 0.9538.

PROJECT

Dictionary App | 2021

This is a product that two of my friends and I worked on while we were studying Object-Oriented Programming.
We built an application that searches English-Vietnamese and Vietnamese-English dictionaries using JavaFX. The application uses Lingoes dictionary data, as well as the VoiceRSS API for speech reading and the Google Translate API for text lookup.
